What is a Bess & how does it work?

A BESS operates more similarly to a generator or utility plant connected to a microgrid. It can store and supply energy to an electrical system. While the BESS can start up quickly, it is not instant and there will be a brief voltage supply disruption during startup.

Does a Bess need a separate ups?

While the BESS can start up quickly, it is not instant and there will be a brief voltage supply disruption during startup. As a precaution, the system will require a separate UPS to power sensitive or critical components, potentially including the controller for the BESS.

What is the minimum separation between a Bess and a building?

IFC 1207.8.3 requires a minimum 10-foot separation between the BESS and any building. However, note this is a minimum requirement; a greater separation may be necessary per the BESS manufacturer's specifications or the owner's insurance provider.

Which lighting requirements are applicable to Bess?

Lighting requirements applicable to other infrastructure within the [County/Village/Town/City], or requirements specified in state statute or code for electrical infrastructure are appropriate to apply to BESS so long as they do not conflict with NFPA 855.

How much sound does Bess cause?

6 BESS have demonstrated minimal or limited auditory impact on adjacent properties. At close distances, sound caused by BESS can range from 60 to 80 decibels, equivalent to the sound of a conversation (60db) and the sound of being inside a car (80db). Beyond property lines, and with the setbacks and screening specifications in NFPA 855,
