

How can Botswana improve its energy supply?

This includes increasing the supply and reliability of Botswana's energy supply, reducing the cost of domestic electricity, reducing and ideally removing the need for Botswana to import external energy and creating a revenue stream through the export of cleaner electricity and sale of gas. ..

Is Botswana implementing energy projects based on the IRP model?

Approved IRP Projects In line with the IRP model results, Government of Botswana has approved and is implementing energy projects with a total installed capacity of 795MW (see Table 5) required to meet the growing energy demand at least cost whilst also reducing the country's carbon foot print.

What is integrated energy planning in Botswana?

Integrated Energy Planning and developing an Integrated Resource Plan (IRP) are an integral part of the energy planning process in Botswana as guided by its 11th National Development Plans (NDP 11) and other sector policies and ambitions. In the energy sector, the NDP 11 focuses on increasing self-reliance on the country's energy resources.

What are the constraints on energy mix and environment in Botswana?

There are no constraints on neither energy mix nor environment, except meeting demand through local resources. Self Sufficiency The Self-sufficiency (SS) scenario assumes that Botswana will become self-sufficient in electricity production, covering domestic needs and exporting electricity by the year 2035.

How is electricity generated in Botswana?

Currently, in Botswana electricity is primarily generated from domestic coal resources. Apart from coal-bed methane, there are no proven reserves of other possible fossil fuel resources for energy generation like natural gas or oil. Botswana has large coal reserves, estimated to be in excess of 200 billion tons.

Will Botswana become self-sufficient in electricity production by 2035?

Self Sufficiency The Self-sufficiency (SS) scenario assumes that Botswana will become self-sufficient in electricity production, covering domestic needs and exporting electricity by the year 2035. The projected demand must be met with local resources in the SS scenario.
