<div class="df_qntext">Do ceramic capacitors crack?

This presentation gives a review of recent project failures caused by cracks in ceramic capacitors and discusses deficiencies of the existing screening and qualification procedures that can reveal the propensity to cracking and effects of soldering stresses. Recent history cases. Effect of hydrogen. A case when derating does not work.

<div class="df_qntext">Why do ceramic capacitors fail?

Ceramic capacitors can fail due to various factors, including dielectric breakdown, excessive leakage current, and degradation caused by environmental stresses. Dielectric breakdown occurs when the voltage applied across the capacitor exceeds the strength of the insulating material, leading to a short circuit.

<div class="df_qntext">Should ceramic chip capacitors be reworked?

Once the type II ceramic chip capacitors are accounted for, the European Space Agency (ESA) has initiated an investigation to assess whether submitting tantalum and flexible termination ceramic capacitors to rework or repair procedures should be forbidden or accepted.

<div class="df_qntext">Why do multilayer ceramic capacitors crack?

Cracking is the major reason of failures in multilayer ceramic capacitors (MLCCs) used in space electronics. Although the probability that as-manufactured capacitors have cracks is relatively low, cracking often occurs during assembly, handling, and the following testing of the systems.

<div class="df_qntext">Why are surface mount ceramic capacitors prone to failure modes?

Surface Mount Ceramic Capacitors (SMCs) are prone to specific failure modes due to their small size and mounting method: Cracking: During Manufacturing: Cracks can form during the manufacturing process, such as during the sintering or dicing stages. During Assembly:

<div class="df_qntext">What causes a ceramic capacitor to leak?

The most probably root cause is related to a potential leakage of a ceramic capacitor. This capacitor had to be replaced as a result of a non-compliance detected during manufacturing and testing phase. For the repair process, the capacitor was assembled using direct wiring soldering process.
