Actually I do have the energy audit. I divided by areas, as in Home Appliances (this is just lights and fridge, a big one 272W), infrastructure (home server, file storage, I based my servers in small Micro HP machines, this gives a nice server in a relatively low power machine, 195W), my home office (with a big power hungry laptop and many monitors as I develop ...

However, grid-tie systems feed excess energy into the grid, while hybrid systems (energy storage systems) use solar batteries to store surplus energy for later use. This excess energy stored in your solar batteries provides backup power to your home in case the grid goes down or if you want to save money during peak energy times.
