

Green cell fresh energy Samoa

Could Samoa's electricity system Go Green?

The future of Samoa's electricity system could go green, a University of Otago study has shown. Pacific Island nations are particularly susceptible to climate change and face high costs and energy security issues from imported fossil fuels. For these reasons many Pacific Island nations have developed ambitious 100 per cent renewable energy targets.

Why is Samoa launching a new electricity source?

The launching of a new electricity source that will benefit up to 5,000 families on the north-western side of the island of Upolu, is a milestone for Samoa's renewable energy efforts. It is also a significant contribution to the country's climate action commitments.

What is Afolau biomass gasification power plant?

The SAT \$11.3 million Afolau Biomass Gasification Power Plant, is a first of its kind facility to be set up in Samoa and the region. The launching of a new electricity source that will benefit up to 5,000 families on the north-western side of the island of Upolu, is a milestone for Samoa's renewable energy efforts.

Green cell fresh energy Samoa

These colors certainly encode various messages. Green is associated with freshness, life, but also with ecology. In the case of Greencell, these associations with green have remained unchanged, but it was extremely important for us to distance ourselves from greenwashing, which is emphasized by the noticeable change in shade.
