<div class="df_qntext">What is a solar battery audit checklist?

Independent auditors use this checklist when they conduct audit inspections of solar battery installations: They look at the safety and quality of battery installations and determine where opportunities for improvement need to be followed up with the solar retailer.

<div class="df_qntext">When will solar batteries be audited?

Audits of battery systems installed with the support of our now completed solar battery loan will continue for the remainder of 2025 as part of our commitment to safety and quality, and ensuring installations comply with the latest standards (see Audits).

<div class="df_qntext">When will audits of battery installations continue?

Audits of battery installations supported through our program will continue for the remainder of 2025.

<div class="df_qntext">What is included in a battery installation guide?

It includes installation advice and examples of installations that may not be meeting the requirements relating to the physical protection of battery systems. This guidance provides further information to support installers' understanding of applicable requirements in:

<div class="df_qntext">What is battery system protection guidance?

It includes installation advice and examples of installations that may not be meeting the requirements relating to battery system protection against the spread of fire and battery system restricted locations. This guidance provides further information to support installers' understanding of applicable requirements in:

<div class="df_qntext">Does a battery system need to be tested if the grid goes down?

Sandy highlights the additional testing required in AS/NZS 4777.1 when installing a battery system that provides an alternative or back up supply when the grid goes down. The obligations that businesses selling battery systems to consumers are required to comply with under the New Energy Tech Consumer Code program.
