

Hydroelectric battery Isle of Man

Where does the Isle of Man electricity come from?

The majority of the Isle of Man's electricity is currently sourced from fossil fuels. The interconnector is a source of carbon neutral electricity on island and also provides a route to export electricity to the GB Market.

Can pumped hydro storage be used on the Isle of Man?

Due to geography, these countries have fantastic potential for pumped hydro storage, which is the cheapest storage medium due to its relatively high efficiency. Such options are not available on the Isle of Man and the island would have to utilise sea water instead.

Does the Isle of Man import energy from the UK?

The Isle of Man currently imports all of its energy from the UK (with the exception of what is produced from Sulby). In all future models, the Isle of Man remains dependent on GB for the provision of baseload. This is the case even where capacity is increased by building excess renewables, as the stabilisation is still provided by interconnectors.

How will the electricity sector change in the Isle of Man?

As the uptake for electric heating and electric vehicles increases, the electricity sector will have to grow to meet future demand. The majority of the Isle of Man's electricity is currently sourced from fossil fuels.

Can electricity be decarbonised on the Isle of Man?

Electricity generation is responsible for approximately 33% of all greenhouse gas emissions on the Isle of Man, and a majority of this is currently sourced from fossil fuels (natural gas). Without the decarbonisation of electricity, it will not be possible to reduce carbon emissions significantly in other areas such as heating and transport.

How can a power interconnector be used in the Isle of Man?

The interconnector can be used to supply the additional energy demand, as well as balancing capability. The diesel engines at Peel and Pulrose with a collective output of 90 MW can together meet island demand. These generating assets and the interconnector can meet the Isle of Man electricity demand requirements.

Voltage 12VDC (Standard 12V battery output is 14.4VDC) Current Draw 4.0A; Power Draw 60W; Lumen Output: 15,200 total lumen output in 360deg field. 3 sides with 120deg beam each side has 5065 lumens output. Length 46" total length including 4" cord grip; Diameter 1.25" 20 foot, 18AWG cable included with alligator clips to directly connect ...
