This document provides a diagram and description of a hybrid photovoltaic and battery energy storage system using a Solis inverter. The system utilizes two independent maximum power point trackers to charge two strings of photovoltaic modules.

<div class="df_qntext">How to get AC output from inverter circuit?

Inverter circuit gives Alternating Current (AC) output from battery Power source, but the battery requires constant DC supply to get charge, so the every inverter circuit contains Rectifier and battery charger segment. We need to provide AC input power to those circuits, then only we can get AC output from inverter circuit.

<div class="df_qntext">How many volts does a solar panel produce?

When exposed to the open Sun, the solar panel produces a peak output of 12 volts at 1600 mA. Here, a three-terminal positive voltage regulator with changeable settings named LM317 is utilized, and it has a current rating of more than 1.5A. 12/4.5Ah SLA Battery receives the regulator's final output, which acts as DC bias for the inverter circuit.
