

Latvia energy butler

How much energy does Latvia use?

Latvia is a net energy importer. Primary energy use in Latvia was 49 TWh, or 22 TWh per million persons in 2009. In 2018, electricity consumption per capita was 3731 kWh. Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030.

Will IEA continue cooperation with Latvia?

We look forward to continuing the IEA's cooperation with Latvia as it takes significant steps to advance its energy transition." The report finds that the creation of a new Ministry of Climate and Energy in January 2023 has been an important step towards meeting many of the country's energy and climate goals.

Can Latvia achieve climate neutrality by 2050?

Actions taken today to reduce emissions will inform the pace and scale of Latvia's energy transition and achieving its ambitious goal of climate neutrality by 2050, according to a new in-depth policy review by the International Energy Agency (IEA).

Will electricity be the cornerstone of Latvia's energy transition?

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the target of 57% renewables in total final consumption by 2030.

What is Latvia's energy transition strategy?

Latvia's current government strategy emphasizes transitioning from a heavy reliance on fossil fuel energy sources to an independent energy supply and the justified application of renewable resources. This policy also highlights energy consumption reduction as important issues for this decade.

What is the energy issue in Latvia?

In Latvia, the energy issue is one of the challenges on the path to a market economy. Since the Second World War, renewable resources such as hydro energy and wood have been traditional sources for production of electricity and heat in this Baltic Country.
