

Mongolia gem energy

What percentage of Mongolia's Electricity is produced by coal?

Domestic consumption of coal accounts for about 70% of Mongolia's primary energy and makes up most of the electricity generation, accounting for about 87% of the domestic electricity production in 2019.

How much energy does Mongolia use?

Mongolia had a total primary energy supply (TPES) of 6.66 Mtoe in 2019. Electricity consumption was 7.71 TWh. Mongolia is a big producer of coal, which is mostly exported.

Does Mongolia Energy Corporation invest in China?

Mongolia Energy Corporation states on its webpage that it has projects and investments in Mongolia and Xinjiang province in China "for oil and gas, coal, ferrous and non-ferrous metal resources."

Is solar power available in Mongolia?

Mongolia has very sunny weather with average insolation above 1,500 W/m² in most of the country, making solar power highly available. 247 MW of solar power plants have been approved for construction. Guaranteed power purchase agreements and favorable tariff structures promote further growth of the industry.

Who owns Mongolia's mineral resources?

According to the Mongolian constitution, all mineral resources are owned by the state, though heavy international investment in mining has tied the country's economy to volatile commodity markets and caused widespread environmental degradation.

Who is Mongolia Energy Corporation Limited (MEC)?

On its website the company states that it was "formerly known as New World CyberBase, the company moved into the energy and resources industry upon its first acquisition of 34,000 hectares of concession areas at Khushuut and Darvi, Western Mongolia. The company was renamed to Mongolia Energy Corporation Limited (MEC) in 2007.
