Who is Outback power?

OutBack Power designs and manufactures off grid and grid connected solar plus storage systems for energy independence. Whether you need a solar inverter, solar battery, or other renewable energy product, OutBack is the choice for your system.

What makes Outback power so popular?

OutBack Power has gained trust and popularity by emphasizing on product performance, establishing themselves as the product of choice in harsh environmental conditions and applications where product reliability is paramount. Their products are suitable for many applications.

What is Outback & how does it work?

OutBack initially designed and manufactured integration hardware used by solar installers to house and protect power electronics installed in remote environments, often harsh locations around the world.

Is Outback a good company?

They are a customer centric company, and has earned trust by establishing themselves as such. OutBack offers a wide product line of inverters, charge controllers (MPPT), and other products suitable for battery based, off-grid, and even grid-tie solar applications.

What products does Outback offer?

OutBack offers a wide product line of inverters, charge controllers (MPPT), and other products suitable for battery based, off-grid, and even grid-tie solar applications. OutBack Power's complete line is known for highly rugged durability and reliability for use of their products in even the harshest environments.

Matt, I have wondered as well if the Radian's built in magnetics act like the balancing transformer which would allow an unbalanced load. By the overload specs 100A at 240V and 200A at 120V, that would seem to be the case, but it isn't clear if the magnetics would overheat if you applied a continuous 4500W or say 5000W 120V load on the inverter.
