

What is a PHS power plant?

Thus, from a climate point of view PHS can be considered as power plants that produce each kWh at ? 25% (depending on efficiency) of the average greenhouse gas emissions of the electricity portfolio. This is one of the best climate performances for large scale balancing available in the power system .

What information does Eurostat provide about PHS?

Eurostat publishes monthly data of electricity consumed for the pumping operation of the PHS stations of European countries. It also provides information on the gross electricity production of PHS. Eurostat only started to distinguish "pure" from "mixed" PHS only in January 2017, thus the available information is still inadequate.

What is energy in Romania?

Energy in Romania describes energy and electricity production, consumption and import in Romania. Romania has significant oil and gas reserves, substantial coal deposits and it has considerable installed hydroelectric power. However, Romania imports oil and gas from Russia and other countries.

Who produces electricity in Romania?

Electric power was provided by the Romanian Electric Power Corporation (CONEL). Energy sources used in electric power generation consisted primarily of nuclear, coal, oil, and liquefied natural gas (LNG). The country has two nuclear reactors, located at Cernavoda, generating about 18-20% of the country's electricity production.

What is pumped hydropower storage (PHS)?

Pumped hydropower storage (PHS) is a variation of conventional reservoir hydropower technology. Its unique feature, compared to conventional schemes, is that it operates in a dual manner i.e. both as turbine and pump . As for all energy technologies, the development of PHS capacities is very sensitive to the utilization rate of the technology.

How much energy does a PHS pump consume a year?

Especially during the recent years (2011-2016) the pumping in PHS stations consumed ? 2-2.5 TWh annually, compared to the peak ? 10.5 TWh of 2002-2004. In terms of monthly operation values (as in Fig. 6 d) this corresponds to a drop from almost 900 GWh/month to less than 200 GWh/month.

5 ???&#0183; German energy group E.ON reached an agreement to sell its 68% stake in Romanian electricity and natural gas supplier E.ON Energie Romania and 98% of related services unit E.ON Asist Complet to the ...
