What is Samson Solar Energy Center?

Samson Solar Energy Center is a nearly \$2 billion capital investment. Over the life of the project, Samson will directly invest \$450 million in the local economy through new tax revenues and lease payments to participating landowners.

Where is the Samson Solar project located?

Samson Solar is located in Lamar, Red River and Franklin Counties. It is a \$1.6 billion capital investment and will support up to 600 jobs over the course of the 36-month construction period.

When will the Samson Solar Energy Center be built?

Construction began in July 2020. The Samson Solar Energy Center represents the equivalent offset of taking 325,000 vehicles off the road, planting more than 500 million trees and will offset the equivalent of 6 million tons of carbon dioxide over the life of the project.

Why is Samson a record breaking energy project?

committed to long-term power purchase agreements. Record breaking scale brings record breaking benefits. Samson will not only generate an unprecedented amount of clean, sustainable energy, it will also support local economic development in Invenergy's communities hosting the project.

What is the largest solar energy center?

The 1,310-megawatt Samson Solar Energy Center, poised to be the largest solar energy center in the United States upon completion, is the latest... Invenergy, a leading privately-held global developer and operator of sustainable energy solutions, today announced the completion of construction... What are solar panels made of?

How much money will Samson invest in the local economy?

Over the life of the project, Samson will directly invest \$450 million in the local economy through new tax revenues and lease payments to participating landowners. The project will also support up to 600 jobs during the 36-month construction phase and create 12 permanent operations and maintenance jobs.

1 Sunlight hits the solar panels.; 2 Direct current (DC) flows from the panels to an inverter that turns it into alternating current (AC).; 3 Transformer increases voltage of electricity.; 4 Electricity travels through transmission lines.; 5 Transformer decreases voltage of electricity.; 6 Electricity travels through collection lines.; 7 Electricity is delivered to customers.

The Samson Solar Energy Center II is a 200-megawatt (MW) solar power facility slated to begin commercial operations later this year. Once completed, Samson II will generate enough clean electricity to power over 40,000 homes. The project is part of Invenergy's Samson Solar Energy Center, a five-phase, 1,310-MW development that is the largest ...
