

How is energy used in Slovenia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Where does Slovenia's electricity come from?

Roughly one-third of Slovenia's electricity comes from hydroelectric sources, one-third from thermal sources, and one-third from nuclear power (with non-hydro renewables constituting two percent of the total). Almost half of Slovenia's total energy consumption consists of imported petroleum purchased on global markets.

Is Slovenia a nominated electricity market operator?

The Energy Agency publishes invitation for the designation as a Nominated Electricity Market Operator for the Slovenian bidding zone for an indefinite period of time. We present key data on the Slovenian electricity and gas markets, consumer protection, supply with heat, and energy efficiency.

Which sectors consume the most energy in Slovenia?

The transportation and industrial sectors were the largest consumers of energy in Slovenia in 2019. Slovenia is a net energy importer, importing all its petroleum products (mainly for the transport sector) and natural gas, as well as some coal. Slovenia has a target of reducing greenhouse gases by 18% in 2030 when compared to 2015.

How much electricity does Slovenia use per capita?

Electricity consumption per capita exceeds 6 600 kWh (20% above the EU average). Slovenia's energy intensity has decreased at the same rate as the EU average (-1.9%/year over 2000-2019) and remained 25% higher in 2019. Benefit from up to 2 000 up-to-date data series for 186 countries in Global Energy & CO₂ data

What will Slovenia do with renewables in 2020?

Under the EU Climate and Energy package, Slovenia was expected to raise the share of renewables in final consumption to 25% in 2020, of which 39% for electricity, 30.8% for heating and cooling, and 10.5% for transport.

Slovenia joined the EU as part of the single market in the energy sector and had to establish a comparable energy system in Europe. This led to the liberalisation of the energy market on the basis of EU directives and regulations, which enabled the development of competition between market participants through clearly defined rules.
