Will space solar build the world's first solar power plant?

The British aerospace company Space Solar, in a collaboration with the private climate sustainability company Transition Labs, based in Iceland, have announced an agreement with Reykjavik Energy to build the world's first operational space solar power plant. The idea is not new.

What is space solar & how does it work?

(Space Solar) The first commercial enterprise the energy of sunlight in space and beam it to the ground may happen in Iceland as the country strives toward clean energy production. The irony is that the country has an unlimited clean energy source literally beneath their feet.

What is the space solar charter?

The SEI forms a world-class innovation and manufacturing powerhouse to develop and industrialise the technology. The Space Solar Charter sets out our mission, vision, and the principles and values our organisation strives to live up to. Learn more about our vision for a future of scalable, clean energy from space.

Could space-based solar power be a viable alternative to space debris?

A 2024 NASA report on the feasibility of space-based solar power systems outlines additional concerns about how technology like this could be both vulnerable to space debris and contribute to the accumulation of it, which Space Solar proposes to alleviate by building and operating the satellites in a less busy orbit.

The office installed 276 ground-based solar panels, for a power of 124 kWp (peak kW of power), over a six-month period from April to September this year in partnership ...

Per a 25-year renewable power purchase agreement, the clean energy produced from the solar projects will supply power to industrial operations of Prony Resources New Caledonia.
