<div class="df\_qntext">What is a solder paste storage cabinet?

Our Solder Paste Storage Cabinet offers a comprehensive solution by integrating essential functions: solder paste storage, temperature control, mixing, and compatibility with Manufacturing Execution Systems (MES). This intelligent system streamlines the solder paste handling process. And it ensures optimal performance in SMT factories.

<div class="df\_qntext">How do you preserve solder paste?

Adhering to these specific guidelines is crucial for preserving their quality and performance: Solder Paste: Solder paste is particularly sensitive to temperature changes. After removing solder paste from cold storage, allow it to gradually warm to room temperature in a sealed container for 2-4 hours before use.

<div class="df\_qntext">What temperature should solder paste be stored?

Unopened solder paste stored at room temperature, 25°C (77°F). Syringes and cartridges should be stored in the refrigerator vertically, dispensing tip pointing down. Allow 4-8 hours for solder paste to reach optimal operating temperature of 20-25°C (68-77°F).

<div class="df\_qntext">Can solder paste be refrigerated?

**NEVER FREEZE SOLDER PASTE!** To obtain the maximum shelf life STIRRI Soldering Paste & Liquid Solder (TM) should be stored in a refrigerator between 3-8°C (37-46°F). Unopened solder paste stored at room temperature, 25°C (77°F). Syringes and cartridges should be stored in the refrigerator vertically, dispensing tip pointing down.

<div class="df\_qntext">What are the advantages of a solder paste storage system?

**Efficient Cold Storage:** Maintains a precise temperature range of 1 to 10°C. **Real-time Monitoring:** Digital displays and temperature curves allow for effective monitoring of storage conditions. Ensuring various types of solder paste stored together without contamination.

<div class="df\_qntext">What causes solder paste oxidation?

Oxidation is a major enemy of solder paste quality. When metal particles in the paste come into contact with oxygen, they form an oxide layer that can prevent proper bonding during soldering. To combat solder paste oxidation, using an airtight container is a must.
