Another sensitivity that can affect optimization plans results from diesel fuel prices. In particular, a fuel price increase of \$0.3/L reduces CO₂ by up to 23.4 % [23], while higher prices of \$0.2/L increase LCOE by up to \$0.21/kWh [24]. Additionally, higher fuel prices increase the total system cost [25] and the cost of clean water production, but a 30 % ...
