

How has Russia impacted Ukraine's energy system?

Ukraine's energy system has been targeted since Russia launched its full-scale invasion of the country in February 2022. These attacks on key infrastructure have recently increased and intensified, posing a huge threat to reliable access to power, heating and communications services across Ukraine this winter.

How important is energy security in Ukraine?

These attacks on key infrastructure have recently increased and intensified, posing a huge threat to reliable access to power, heating and communications services across Ukraine this winter. This special report lays out 10 key energy actions to reinforce the country's energy security - essential to its security overall - at this critical juncture.

How much energy does Ukraine use?

Its primary energy supply was 93 Mtoe in 2018, corresponding to around 90% of Poland's consumption. Ukraine's energy mix is relatively diversified, with no fuel representing more than 30% of the energy mix. In 2018, the share of coal (the country's primary fuel) dropped to 30%, followed closely by natural gas (28%) and nuclear (24%).

What is Ukraine's energy security & the coming winter?

This special report from the IEA, Ukraine's Energy Security and the Coming Winter, provides an energy action plan for Ukraine and its partners to help the country meet its energy needs through the challenging months ahead. Ukraine's energy system has been targeted since Russia launched its full-scale invasion of the country in February 2022.

What is Ukraine's energy mix?

Ukraine's energy mix is relatively diversified, with no fuel representing more than 30% of the energy mix. In 2018, the share of coal (the country's primary fuel) dropped to 30%, followed closely by natural gas (28%) and nuclear (24%). Ukraine depends on imports for around 83% of its oil consumption, 33% of its natural gas and 50% of its coal.

How bad is Ukraine's energy infrastructure?

Four months of brutal strikes on Ukraine's energy infrastructure have done so much damage that even in Kyiv there are only 10 hours of electricity per day--and just four for some other cities. It will take years to rebuild. Come winter, this situation will get much worse. DTEK executives estimate that winter blackouts could reach 20 hours per day.

Russian President Vladimir Putin has threatened to strike Ukraine again with a new nuclear-capable ballistic missile following Moscow's latest widespread attack on critical energy infrastructure.

The drone and missile attack, which targeted Ukraine's energy infrastructure, came as fears are mounting about Moscow's intentions to devastate Ukraine's power generation capacity ahead of the winter.
