Venezuela: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

To counteract this heavy reliance on hydroelectric power -- an energy source that, despite being renewable, can still have negative environmental and social consequences -- the government began a push for a transition to other kinds of renewable energy in Venezuela roughly two decades ago. In the early 2000s, the government of former President Hugo ...
