Are Cyclon batteries a good choice?

CYCLON batteries are also shock and vibration resistant so it can be wherever you need extreme power. Fastest Recharge - EnerSys pure lead chemistry allows these batteries and cells to offer the highest recharge efficiency of any sealed-lead battery on the market. With pure lead, you can achieve a 95% state of recharge in less than one hour.

What are EnerSys Cyclon cells & monoblocs used for?

EnerSys Cyclon cells & Monoblocs go into a wide range of industrial applications from emergency lighting to medical and military. These rugged batteries with strong external packaging can withstand the harshest of environments with a very wide operating temperature of -65°C to $+80^{\circ}\text{C}$.

What is a Cyclon battery?

Pure Lead Plates - Made from 99.99% pure lead, Cyclon battery plates are extremely thin, so they offer more surface area than conventional batteries - and far more power. AGM Plate Separator - High purity acid is absorbed right into the Absorbed Glass Mat (AGM) plate separators, so the CYCLON battery provides leak-proof operation in any position.

Are Cyclon batteries UL 94V-0 rated?

Rugged Construction - CYCLON batteries can not only withstand extreme temperatures but also harsh usage. Single Cells are housed in UL 94V-0 rated material. The metal jacket adds flammability protection. CYCLON batteries are also shock and vibration resistant so it can be wherever you need extreme power.

How long do Cyclon batteries last?

At 20°C , CYCLON battery single cells offer a fifteen-year design life. High Stable Voltage Delivery - A low internal resistance leads to a high stable voltage delivery. This low internal resistance allows CYCLON batteries to discharge and recharge more quickly and efficiently which offers greater application flexibility.

How many cycles can a Cyclon cell deliver?

Cyclon cells will deliver up to 300 cycles, experience no "dry out", have a high stable voltage delivery and flat discharge voltage similar to that of NiCd cells. They also emit minimal to no gassing under normal charging conditions and are safe for installation in offices, aircraft cabins, hospitals or any other environment.

4 Publication No: EN-CYC-SG-004 - June 2014 Resealable safety valve A 50-PSI vent lets gases escape, then automatically reseals, so there's no risk of excessive gas accumulation within the battery, or "dry out" failure

0820-0004 è una batteria ricaricabile mono cella di 2V/25Ah caratterizzata dalla tecnologia al piombo acido. È dotata di terminali a prigioniero. Non richiede di limitare la corrente di spunto alla batteria durante la carica a tensione costante. La bassa resistenza interna della singola cella EnerSys CYCLON permette grandi correnti di spunto senza danni. Poiché non tutta la carica ...

The EnerSys Cyclon 0800-0004 is a pure Lead-Tin rechargeable Cyclon X cell. The purity of the materials used is the key to supporting the Cyclon batteries performance benefits which include a longer service life, combined with higher reliability and fewer system failures, which results in an excellent cost-usage ratio.
