<div class="df\_qntext">Is a large-scale wind farm a safe power system?

The validity of the strategy is validated in the modified IEEE 14-bus system and an actual regional power system of China. As large-scale wind farms (WFs) are being increasingly integrated into the power grid, the uncertainty of their power output is identified as the factor that can impact the stability and safety of power systems .

<div class="df\_qntext">How does a CSP plant and a wind farm work?

These two measures expand the consumptive space of wind power,thus eliminating wind curtailment in the system. From 8:00 to 22:00,the CSP plant and wind farm meet part of the load demand,which reduces the power supply pressure and carbon emission of TPUs.

In this direction,a bi-level programming model for the optimal capacity configurationof wind,photovoltaic,hydropower,and pumped storage power system is derived. To model the operating mode of a pumped storage power station,two 0-1 variables are introduced.

<div class="df\_qntext">Do pumped storage power plants perform well in photovoltaic integrations?

In (Wang and Cui, 2014), the authors have investigated the optimal operation of pumped storage power plants in the context of photovoltaic integrations. In (Baniasad and Ameri, 2012), the authors have proposed a joint operation strategy for wind, photovoltaic and pumped storage hydro energy, taking into account the multiple performance benefits.

<div class="df\_qntext">How can hybrid energy systems incorporating pumped storage power plants be optimized?

The models for optimizing the schedule of hybrid energy systems incorporating pumped storage power plants are developed therein.
