Who is XGS energy?

Contact XGS Energy--the energy innovator making global deployment of terawatt-scale geothermal heat and power a reality. Reimagining geothermal energy with the first 24/7, carbon-free, scalable, truly closed-loop heat-harvesting system.

What makes XGS energy scalable?

At XGS Energy,our unique heat harvesting technologymakes geothermal energy scalable. The result? Global access to affordable,carbon-free 24/7 geothermal energy. We drill a single,directional well to access hot rock,targeting 250 °C or higher. We then establish a network of proprietary thermally conductive material around the wellbore.

Why should you choose an XGS system?

With an XGS system,there is no need to continuously buy,transport,and chemically treat large volumes of water. Further,our closed-loop well architecture is designed to avoid cost-intensive challenges such as scaling and corrosion that traditional geothermal systems often encounter over time. Maintain well productivity.

How does XGS energy recirculate water?

These systems limit geothermal energy production to areas where there is an ample supply of water. XGS Energy's system recirculates the same water over and over again through a closed-loop,hermetically-sealed system. By eliminating the need for large volumes of water,our solution makes geothermal production possible even in water-scarce regions.
