

Yemen shamoos international energy co

What is the main energy source in Yemen?

According to the International Energy Agency, in 2000, oil made up 98.4% of the total primary energy supply in Yemen with the remainder comprising biofuels and waste (International Energy Agency). Natural gas and coal were introduced into the energy mix around 2008, and wind and solar energies were added around 2015.

How does Yemen generate electricity?

Yemen will generate annual revenue from carbon trading and the sale of unused fossil fuels (such as oil and its by-products) and natural gas by relying on renewable energy to generate electricity. The total generating capacity of wind and solar energy is $18600 + 34,286 = 52886$ MW (52.886GW).

How much energy does Yemen use?

In 2017, oil made up about 76% of the total primary energy supply, natural gas about 16%, biofuels and waste about 3.7%, wind and solar energies etc. about 1.9%, and coal about 2.4%. According to the International Energy Agency report, the final consumption of electricity in Yemen in 2017 was 4.14 TWh.

How much oil does Yemen have?

Yemen, the Arab world's poorest country, has reserves of some 3 billion barrels of oil and 17 trillion cubic feet of gas, according to the U.S. Energy Information Administration. The Associated Press is an independent global news organization dedicated to factual reporting.

What is the energy mix in Yemen?

However, Yemen's current energy mix is dominated by fossil fuels (about 99.91%), with renewable energy accounting for only about 0.009%. The national renewable energy and energy efficiency strategy, on the other hand, sets goals, including a 15% increase in renewable energy contribution to the power sector by 2025 (Fig. 11).

How is Yemen dealing with energy problems?

Yemen is dealing with the dilemma of energy networks that are unstable and indefensible. Due to the fighting, certain energy systems have been completely damaged, while others have been partially devastated, resulting in a drop in generation capacity and even fuel delivery challenges from power generation plants.
